

Mechanical and Automation Engineering

Department of Mechanical and Automation Engineering
The Chinese University of Hong Kong

Foreword

Engineering creates Real Value for the society

Engineering is not about passing goods or dollars from one hand to another and making profit out of the process. Engineering is about creating real value for the society. It is the pursuit of science for direct benefit of mankind, creating a better and safer world for humans. It encompasses turning natural materials to bridges and optical fiber and robots, and transforming sunlight and wind and waterfalls to power sources. The world would be an entirely different one without engineering innovations. It must be noted that engineering is beyond mere application of science. Almost every task in engineering, be it building a robot that can walk on two legs, or turning waterfall into energy source, is about a problem that does not come from nature but exists only after the task is spelled out, whose solution demands both innovation and deep analysis. Engineering is both application and furtherment of science.

Engineering Education is for Engineering career, and beyond

Engineering training is not just about preparing engineers for the society. The training has a great deal to do with abstracting real-life problems to bare bone form, relating the problems to scientific and mathematical tools by so doing, arriving at solutions that can withstand uncertainties and disturbances in the real world, and designing proper human interface to ensure ease of use. A problem-solving approach like this has tremendous value in many sectors of the society. Numerous prominent corporate executives, technical consultants, entrepreneurs came from engineering background. A solid engineering education opens the door to many career options beyond engineering.

The MAE Discipline focuses on Modern Engineering

The **Mechanical and Automation Engineering (MAE)** Department of CUHK aims at offering solid education and cutting-edge research opportunities around two aspects of engineering: (1) the proper physical interaction of engineering systems with the physical world through force, heat, and energy (and hence the word "*Mechanical*" in the department name); and (2) the self-operability of the systems demanding minimum intervention from humans (and hence the word "*Automation*").

The physical interaction of engineering innovations with the world is important because Engineering is, after all, about restructuring the environment for human convenience and safety. MAE seeks to design and control such interaction based upon fundamental knowledge on rigid body mechanics, fluid mechanics, thermodynamics, and conservation of mass and energy.

It is also desired that engineering systems do not just do what is instructed but exhibit certain degree of autonomy in their operations. To achieve that, MAE seeks to use tactile, force, range, temperature, and other sensors to measure system performance, link system performance to system input, and design intelligent algorithms for making fast and right decisions.

The aspects form the core of modern engineering. Knowhow on such aspects allows engineers to reach far in their innovations.

Accredited by the Hong Kong Institution of Engineers (HKIE), the programme is known for its good design and quality teaching.

MAE welcomes You

We invite you to browse through our website <<http://www.mae.cuhk.edu.hk>> to learn more about the Department, the professors, the academic programmes, and the researches.

We welcome anyone with a "heart" on engineering to join us pursue the exciting opportunities in MAE.

Programme Curriculum

Year 1

Faculty Package

ENGG1100 Introduction to Engineering Design
ENGG1110 Problem Solving By Programming

Foundation Science Courses

CHEM1380 Basic Chemistry for Engineers
ENGG1310 Engineering Physics: Electromagnetics, Optics and Modern Physics
LSCI1001 Basic Concepts in Biological Sciences
LSCI1003 Life Sciences for Engineers
PHYS1003 General Physics for Engineers
PHYS1110 Engineering Physics: Mechanics and Thermodynamics

Foundation Mathematics Courses

ENGG1410 Linear Algebra and Vector Calculus for Engineers
MATH1510 Calculus for Engineers

University Core Requirements

English (4 units), Chinese (3 units), College GE (3 units),
Foundation GE (3 units), PE (2 units)

Year 2

Faculty Package

ENGG2601 Technology, Society and Engineering Practice (2 units)

Foundation Mathematics Courses

ENGG2420 Complex Analysis and Differential Equations for Engineers
ENGG2430 Probability and Statistics for Engineers

Major Required Courses

ELEG2202 Fundamental of Electric Circuits
MAEG2020 Engineering Mechanics
MAEG2030 Thermodynamics

Major Elective

**Breadth Elective (0-3 units)

University Core Requirements

English (3 units), Chinese (3 units), Foundation GE (3 units) & Other GE (3 units)

ENGG2602 Engineering Practicum (1 unit)
(5 weeks)

Year 3

Major Required Courses

MAEG3010 Mechanics of Materials
MAEG3020 Manufacturing Technology
MAEG3030 Fluid Mechanics
MAEG3050 Introduction to Control Systems

Major Electives

**Breadth or Depth Electives (0-6 units)

University Core Requirements

English (2 units), College GE (3 units), Other GE (3 units) & IT (1 unit)

Year 4

Major Required Courses

MAEG4998 Final Year Project I
MAEG4999 Final Year Project II

Major Electives

**Breadth or Depth Electives (6-12 units)

University Core Requirements

Other GE (3 units)

Major Electives

Design and Manufacturing Stream

(B) / (C) CSCI1020 Hands-on Introduction to C++ (1 unit)
(B) / (C) MAEG2010 Computer-Aided Drafting (2 units)
(B) / (C) MAEG3040 Mechanical Design
(B) / (E) EEEN3030 Engineering Materials
(B) / (E) MAEG3060 Introduction to Robotics
(B) / (E) MAEG3070 Fundamentals of Computer-Aided Design
(B) / (E) MAEG3080 Fundamentals of Machine Intelligence
(B) / (E) MAEG3920 Engineering Design and Applications
(D) / (E) MAEG4010 Computer-Integrated Manufacturing
(D) / (E) MAEG4020 Finite Element Modelling and Analysis
(D) / (E) MAEG4060 Virtual Reality Systems and Applications
(D) / (E) MAEG4070 Engineering Optimization
(D) / (E) MAEG5030 Topics in Computer-Aided Geometric Design
(B) / (E) MAEG5050 MEMS and Nano-Robotics
(or ENGG5404 Micromachining and Microelectromechanical Systems)
(D) / (E) MAEG5100 Advanced Engineering Design and Optimization
(or ENGG5405 Theory of Engineering Design)
(B) / (E) MAEG5120 Nanomaterials and Nanotechnology: Fundamentals and Applications
(B) / (E) SEEM3500 Quality Control and Management

Mechatronics Stream

(B) / (C) CSCI1020 Hands-on Introduction to C++ (1 unit)
(C) / (D) MAEG4040 Mechatronic Systems
(C) / (D) MAEG4050 Modern Control Systems Analysis and Design
(B) / (E) EEEN3030 Engineering Materials
(B) / (E) ELEG2401 Introduction to Embedded Systems
(B) / (E) ENGG2020 Digital Logic and Systems
(B) / (E) MAEG3080 Fundamentals of Machine Intelligence
(B) / (E) MAEG5050 MEMS and Nano-Robotics
(or ENGG5404 Micromachining and Microelectromechanical Systems)
(B) / (E) MAEG5080 Smart Materials and Structures

Robotics and Automation Stream

(B) / (C) CSCI1020 Hands-on Introduction to C++ (1 unit)
(B) / (C) MAEG3060 Introduction to Robotics
(C) / (D) MAEG4050 Modern Control Systems Analysis and Design
(B) / (E) EEEN3030 Engineering Materials
(B) / (E) MAEG1010 Introduction to Robot Design
(D) / (E) MAEG4010 Computer-Integrated Manufacturing
(D) / (E) MAEG5010 Advanced Robotics
(or ENGG5402 Advanced Robotics)
(D) / (E) MAEG5020 Topics in Linear Control Systems
(or ENGG5403 Linear System Theory and Design)
(B) / (E) MAEG5050 MEMS and Nano-Robotics
(or ENGG5404 Micromachining and Microelectromechanical Systems)
(D) / (E) MAEG5090 Topics in Robotics
(B) / (E) MAEG5120 Nanomaterials and Nanotechnology: Fundamentals and Applications

Others

(B) CSCI1040 Hands-on Introduction to Python (1 unit)
(B) CSCI1050 Hands-on Introduction to MATLAB (1 unit)
(B) CSCI2100 Data Structures
(B) CSCI2120 Introduction to Software Engineering (2 units)
(B) CSCI2800 Numerical Computation
(B) CSCI3170 Introduction to Database Systems
(B) ~DSME1030 Economics for Business Studies I
(B) EEEN2020 Renewable Energy Technologies
(D) EEEN4010 Kinetic Energy Harvesting Devices and Systems
(D) EEEN4020 Solar Energy and Photovoltaic Technology
(D) EEEN4030 Nuclear Energy and Risk Assessment
(D) EEEN4050 Energy Storage Devices and Systems
(D) EEEN4060 Energy Distribution
(B) ELEG3101 Medical Instrumentation and Sensors
(B) ENGG1820 Engineering Internship (1 unit)
(D) MAEG4030 Heat Transfer
(D) MAEG4080 Introduction to Combustion
(D) MAEG5060 Computational Intelligence
(D) MAEG5070 Nonlinear Control Systems
(D) MAEG5110 Quantum Control
(B) MGNT1010 Introduction to Business
(B) MGNT4090 Technology and Innovation Management
(B) ~SEEM2440 Engineering Economics
(B) SEEM3450 Engineering Innovation and Entrepreneurship
(B) SEEM3490 Information Systems Management

Summary

University Core Requirements (39 units):

- General Education (College/Foundation/Others)	21
- Languages (English & Chinese)	15
- Physical Education	2
- IT	1

Major Requirements (75 units):

- Faculty Package	9
- Foundation Science	9
- Foundation Mathematics	12
- Required Courses	21
- Elective Courses ** (Breadth & Depth)	18
- Final Year Projects	6

Free Electives (9 units)

	9
Total	123

** At least 12 units of Major Electives at MAEG3000 and above level or ENGG5000 level, of which at most 3 units of Major Electives should be at MAEG3000 level and at least 9 units of Major Electives at MAEG4000 and above level or ENGG5000 level are required.

- (B) - Breadth Electives (9 units are required)
- (C) - Compulsory Courses in specific streams
- (D) - Depth Electives (9 units are required)
- (E) - Electives in specific streams

~ Students can take either SEEM2440 or DSME1030 but not both.

To qualify for a stream, students must complete a minimum of 12 units taken under the stream.

For updated information, please refer to <http://www.mae.cuhk.edu.hk>.

MAE Scholarship

Industrial Scholarship

With the generous donations from a number of industrial companies, many industrial scholarships are set up specifically for MAE students.

Internship and Student Exchange Programme

MAE students could opt for summer internship, work-study, or international student exchange programme. The in-field training helps prepare students to be the next generation professional engineers.

Career Prospects

Upon graduation, MAE students will find career opportunities as mechanical engineers, production engineers, control engineers, design engineers, process engineers, maintenance engineers, systems managers, and other professions. They can also pursue postgraduate studies at local or overseas universities.

MAE Alumni

Lam Miu Ling Cherry (BEng 2000, MPhil 2002 & PhD 2008) Assistant Professor, City University of Hong Kong

I am a media artist and assistant professor in School of Creative Media at City University of Hong Kong. I received my BEng, MPhil and PhD degrees all from the Department of Mechanical and Automation Engineering with a focus on robotics and wireless sensor network research. I was an engineer in Hong Kong Aero Engine Services Limited before the PhD Programme. Upon PhD graduation, I was awarded a prestigious fellowship by the Croucher Foundation to support my postdoctoral research at the California Nanosystems Institute at UCLA. My current research projects focus on bioinformatics and physical intelligence.

As a media artist, I create artworks on the cutting-edge technologies and at the intersection of art, technology and science. The trainings on computer science, engineering design, and electronics obtained from MAE Department equipped me to explore new art dimensions by introducing novel ingredients to media arts. The MAEG Programme is not only practical for the development of engineering perspectives and researches, but also offering the possibilities to bridge across multiple disciplines. *By Cherry Lam*

Lam Hiu Fung (BEng 1999, MPhil 2001 & PhD 2004) Chairman and Chief Executive Officer (CEO), Sengital Limited

Dr. Alan Lam received his BEng and MPhil degrees from the Department of Mechanical and Automation Engineering. He obtained his PhD degree specializing in systems integration with focus of MEMS sensing systems. He is the inventor of VRMS, and the leader of the VRMS technology team.

Dr. Lam is active in academic in Hong Kong. He supervised over 300 students over past 10 years and currently is the external program board member of Shatin IVE Electronic Engineering Department, adjunct professor and advisory board member of Department of Electronic Engineering of City University of Hong Kong. On industrial side, he is the committee member of HKPKI forum, the member of IEEE, member of HKIE, professional member of HKIA and member of HKETA.

Dr. Lam is one of the founders of Sengital Ltd. and is now working as the Chief Executive Officer. Currently, Sengital is the corporate member of Hong Kong Medical and Healthcare Device Industries Association; corporate member of HKEIA, corporate member of HKCA, tenant of Hong Kong Science Park and associate member of ZigBee Alliance.

Recently, Dr. Lam has been selected as one of the Ten Outstanding Young Persons by the Junior Chamber International Hong Kong (JCIHK). *By Lam Hiu Fung*

Leung Yun Yee (BEng 2014 & MPhil 2016) Postgraduate Student at Department of Mechanical and Automation Engineering, CUHK

Time flies, I have studied in The Chinese University of Hong Kong for five years. And I received my BEng and MPhil in Mechanical and Automation Engineering. I have never thought about being an engineer when I was a child. However, I changed my mind because I had studied a subject called Design and Technology when I was a secondary school student. I learnt something practically related to engineering from the subject. I had made use of the knowledge from that subject to invent something to help others. This encouraged me to aim at being an engineer. When I was a form five student, I was given a chance to join an intern to work with Professor YAM Yeung on improving my invention. This was the first time I got to know more about the department and I was impressed by the research environment of the department.

From the last five years, I learnt lots about engineering, for example, fluid mechanics, structure and programming etc. Besides, university gave me lots of opportunities in applying all these knowledge via joining various invention competitions, for example, with my invention i-Device, I was awarded Bronze Award in the 2013 Hong Kong Information and Communication Technology Awards and came 1st runner up in Present Around the World Hong Kong 2012.

As I learnt more, I realized that I am very keen on research work. The disciplines within Mechanical and Automation Engineering, like medical robotics, sensor network, etc. are very interesting. Therefore, I want to continue my studies and research works on medical devices. *By Leung Yun Yee*

Admissions

For details of the admission information, please refer to the Faculty brochure or the Faculty website <http://www.erg.cuhk.edu.hk>.
